The following is an examiner's statement of reasons for allowance: The recitation of a device for separating debris from rainwater as it flows into a downpipe from a roof gutter comprising a compartment fitted to the upper end of the downpipe having a pair of sidewalls supporting a perforated rotary drum such that rainwater passes through the perforations and the debris are ejected by the rotation of the drum patentably distinguishes over the prior art of record. Most prior art gutter filters as exemplified by Naddy, Carey, Esmond, Wade, Bolt, Mazziotti, Jones, Tiderington, Bessette, German patent 44 23 251 and Canadian patent 2,206,414 are fixed. McKenny discloses a dumping gutter, while Gleaves and Ruttenberg disclose conveyors for a gutter. Japanese patent 8-100499 discloses a rotating drum in a gutter, but the drum is not a filter, rather, it is solid and serves to protect the gutter from hard rains and snow. Rotating filters are known, as exemplified by Schwinger, Damman and Lynch, but there is no teaching of using such a filter on the downpipe of a roof gutter.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
